

BELKIN SECURE WIRED KEYBOARD

The ideal companion for your iPad or Samsung tablet

Secure, slim, and lightweight, the plug-and-play Belkin Secure Wired Keyboard is the perfect partner for comfortable typing and standardized testing.

Bluetooth wireless keyboards are not always permitted in school testing environments, and battery-powered or rechargeable keyboards can run out of power at unfortunate moments, with unfair consequences.

The **Belkin Secure Wired Keyboard** connects directly and securely to a single iPad or Samsung tablet, and it does not require batteries or recharging, making it the perfect partner for standardized testing. The slender design features well-spaced keys made specifically for the classroom. Its plug-and-play simplicity enables reliable, easy use.

Integrated multimedia controls support advanced learning needs. A row of function keys offers convenient one-touch access to a variety of features, including volume, play/pause, fast-forward and rewind, screen lock, screen capture, and more. And full-size arrow keys allow users to navigate easily through documents and websites.

Its durable construction and child-friendly configuration make the Belkin Secure Wired Keyboard ideal for school deployments at any grade level.

Belkin Secure Wired Keyboards are available for the 30-pin iPad connector (Part # B2B114), the Lightning iPad connector (Part # B2B115), and Samsung tablets with the 5-pin micro-USB connector (Part # B2B120).
